Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application. The following listing provides the amended claims with the amendments marked with deleted material crossed out and new material underlined to show the changes made.

Claims 1-19 (Canceled)

a)

20. (Previously Presented) A method for creating a description of a user interface that

transacts with a database having a data model containing a plurality of entities, the description

being created using the data model of the database, the method comprising:

classifying the plurality of entities into entity types, the classifying

comprising:

determining whether a first entity in the plurality of entities satisfies a first

set of conditions; and

classifying the first entity as a first entity type upon determining that the

first entity satisfies the first set of conditions; and

b) creating the description of the user interface based upon the classification

of the plurality of entities.

21. (Previously Presented) The method of claim 20 wherein:

each entity in the data model describes a type of data object associated with the

database; and

the classifying produces the first entity type for a first group of data objects and a

second entity type for a second group of data objects, the data objects in the first group of data

objects being updated in the database more frequently than the data objects in the second group

of data objects.

Client Docket No.: P2468USC1 Attorney Docket No.: APLE.P0004C

22. (Previously Presented) The method of claim 21 wherein the first entity type is a

Main entity type and the second entity type is an Enumeration entity type.

23. (Previously Presented) The method of claim 20 wherein the description is a

generic description configured to be interpreted in different platforms or operating environments.

24. (Previously Presented) The method of claim 20 wherein the description is in

eXtensible Markup Language (XML).

25. (Previously Presented) The method of claim 20 wherein the classifying and

creating are performed automatically without human assistance.

26. (Previously Presented) The method of claim 20 further comprising, before the

receiving:

obtaining a current data model of the database, the current data model reflecting

any changes to the database up to when the current data model is obtained, wherein a current

description of the user interface is created using the current data model of the database.

27. (Previously Presented) The method of claim 20 further comprising:

before the classifying, receiving a request from a client that the description be

created, wherein receiving the request triggers the classifying of entities into entity types.

28. (Previously Presented) A computer for creating a description of a user interface

that transacts with a database having a data model containing a plurality of entities, the

description being created using the data model of the database, the computer comprising:

a memory for storing sets of instructions comprising:

a set of instructions for classifying the plurality of entities into entity types, the set

of instructions for classifying comprising:

Client Docket No.: P2468USC1

Attorney Docket No.: APLE.P0004C PTO Serial: 10/824,251 a set of instructions for determining whether a first entity in the plurality of

entities satisfies a first set of conditions; and

a set of instructions for classifying the first entity as a first entity type upon

determining that the first entity satisfies the first set of conditions; and

a set of instructions for creating the description of the user interface based upon

the classification of the plurality of entities; and

a network interface for interfacing with a network.

29. (Previously Presented) The computer of claim 28 wherein the description is a

generic description configured to be interpreted in different platforms or operating environments.

30. (Previously Presented) The computer of claim 28 wherein the sets of instructions

further comprises:

a set of instructions for distributing the description to a client via the network for

enabling the client to generate the user interface; and

a set of instructions for providing data from the database to the client for

populating the user interface.

31. (Currently Amended) A computer program-product-having a computer readable

medium having storing a computer program instructions recorded thereon for creating which

when executed by at least one processor creates a description of a user interface that transacts

with a database having a data model containing a plurality of entities, the description being

created using the data model of the database, the computer program product comprising:

a) instructions for classifying the plurality of entities into entity types, the

instructions for classifying comprising instructions for:

Client Docket No.: P2468USC1

Attorney Docket No.: APLE.P0004C

determining whether a first entity in the plurality of entities satisfies a first

set of conditions; and

classifying the first entity as a first entity type upon determining that the

first entity satisfies the first set of conditions; and

b) instructions for creating the description of the user interface based upon the

classification of the plurality of entities.

32. (Currently Amended) The computer program product readable medium of claim

31 wherein the description is a generic description configured to be interpreted in different

platforms or operating environments.

33. (Currently Amended) The computer program product readable medium of claim

31 further comprising:

instructions for obtaining a current data model of the database, the current data

model reflecting any changes to the database up to when the current data model is obtained,

wherein a current description of the user interface is created using the current data model of the

database.

34. (Previously Presented) An apparatus for creating a description of a user interface

that transacts with a database having a data model containing a plurality of entities, the

description being created using the data model of the database, the apparatus comprising:

a) means for classifying the plurality of entities into entity types, the means for

classifying comprising means for:

determining whether a first entity in the plurality of entities satisfies a first

set of conditions; and

Client Docket No.: P2468USC1

Attorney Docket No.: APLE.P0004C PTO Serial: 10/824,251

-- 7 --

classifying the first entity as a first entity type upon determining that the

first entity satisfies the first set of conditions; and

b) means for creating the description of the user interface based upon the

classification of the plurality of entities.

35. (Previously Presented) A method for generating a user interface that transacts

with a database having a data model containing a plurality of entities, the method comprising:

receiving a description of the user interface, the description being based upon

classification of the plurality of entities into entity types wherein the classification comprises

classification of a first entity as a first entity type upon determination that the first entity satisfies

a first set of conditions; and

generating the user interface using the description of the user interface.

36. (Previously Presented) The method of claim 35 further comprising:

before the receiving, sending a request that the description be created, wherein the

request triggers the classifying of entities into entity types; and

after the generating, receiving data from the database in order to populate the user

interface.

37. (Previously Presented) The method of claim 35 further comprising, before the

receiving:

sending preferences for the user interface, the preferences being utilized in

creating the description.

38. (Previously Presented) The method of claim 35 further comprising, before the

receiving:

sending authentication information.

Client Docket No.: P2468USC1 Attorney Docket No.: APLE.P0004C

PTO Serial: 10/824,251

-- 8 --

(Previously Presented) A computer for generating a user interface that transacts 39.

with a database having a data model containing a plurality of entities, the computer comprising:

a memory for storing sets of instructions comprising:

a set of instructions for receiving a description of the user interface from an

application server, the description being based upon classification of the plurality of entities into

entity types wherein the classification comprises classification of a first entity as a first entity

type upon determination that the first entity satisfies a first set of conditions; and

a set of instructions for generating the user interface using the description of the

user interface; and

a network interface for transacting with the application server and the database via

a network.

(Previously Presented) The computer of claim 39 wherein the sets of instructions 40.

further comprises:

a set of instructions for sending to the application server a request that the

description be created; and

a set of instructions for receiving data from the database in order to populate the

user interface.

(Previously Presented) The computer of claim 39 wherein the sets of instructions 41.

further comprises:

a set of instructions for sending preferences for the user interface to the server

application, the preferences being utilized in creating the description.

(Currently Amended) A computer readable medium storing a program product 42.

having a computer readable medium having computer program which when executed by at least

Client Docket No.: P2468USC1

Attorney Docket No.: APLE.P0004C

one processor generates instructions recorded thereon for generating a user interface that

transacts with a database having a data model containing a plurality of entities, the computer

program product comprising:

instructions for receiving a description of the user interface, the description being

based upon classification of the plurality of entities into entity types wherein the classification

comprises classification of a first entity as a first entity type upon determination that the first

entity satisfies a first set of conditions; and

instructions for generating the user interface using the description of the user

interface.

43. (Currently Amended) The computer readable medium program product of claim

42 wherein the description of the user interface is created using a current data model of the

database, the current data model reflecting any changes to the database up to when the

description is created.

44. (Currently Amended) The computer readable medium program product of claim

42 further comprising:

instructions for sending preferences for the user interface, the preferences being

utilized in creating the description.

45. (Previously Presented) An apparatus for generating a user interface that transacts

with a database having a data model containing a plurality of entities, the apparatus comprising:

means for receiving a description of the user interface, the description being based

upon classification of the plurality of entities into entity types wherein the classification

comprises classification of a first entity as a first entity type upon determination that the first

entity satisfies a first set of conditions; and

Client Docket No.: P2468USC1 Attorney Docket No.: APLE.P0004C

means for generating the user interface using the description of the user interface.

46. (Previously Presented) A system comprising:

a database having a data model containing a plurality of entities; and

a server communicatively coupled to the database for creating a description of a

user interface that transacts with the database, the description being based upon classification of

the plurality of entities into entity types wherein the classification comprises classification of a

first entity as a first entity type upon determination that the first entity satisfies a first set of

conditions.

47. (Previously Presented) The system of claim 46 wherein the server obtains a

current data model of the database, the current data model reflecting any changes to the database

up to when the current data model is obtained, a current description of the user interface being

created using the current data model of the database.

48. (Previously Presented) The system of claim 46 wherein the server is in persistent

communication with the database.

49. (Previously Presented) The system of claim 46 wherein the server is

communicatively coupled to a first client via a network and distributes the created description to

the first client for enabling the first client to generate the user interface.

50. (Previously Presented) The system of claim 49 wherein the server provides the

first client an only point of access to the database.

51. (Previously Presented) The system of claim 49 wherein the server is

communicatively coupled, via the network, to a second client having a different platform or

operating environment than the first client, and distributes the created description to the second

client for enabling the second client to generate the user interface.

Client Docket No.: P2468USC1 Attorney Docket No.: APLE.P0004C

52. (New) A computer comprising:

> a description of a data store; a)

b) a browser; and

an application for generating user-interface elements based on said c)

description, said user-interface elements for display in said browser and for facilitating

transactions with said data store.

53. (New) The computer of claim 52 further comprising a storage for storing the

description, the browser, and the application.

(New) The computer of claim 52, wherein said user-interface elements facilitates 54.

transactions by permitting a user to transact with said data store.

(New) The computer of claim 54, wherein at least one user interface element is 55.

displayed in said browser after the user requests data from said data store.

(New) The computer of claim 52, wherein said browser is a web browser, wherein 56.

said application is a distributed application running on said the web browser.

(New) The computer of claim 55, wherein said distributed application is an 57.

applet.

58. (New) A method comprising:

> receiving a first request for a first user interface to transact with a first data a)

store;

supplying a first description to generate the first user interface; b)

receiving a second request for a second user interface to transact with a c)

second data store; and

supplying a second description to generate the second user interface, d)

> Client Docket No.: P2468USC1 Attorney Docket No.: APLE.P0004C

-- 12 --

wherein said first and second descriptions differ.

59. (New) The method of claim 58, wherein the first and second data stores are the

same data store, wherein the first request is received from a first user while the second request is

received from a second user different than the first, wherein the first description is supplied to

the first user while the second description is supplied to the second user.

60. (New) The method of claim 59, wherein the first and second user interfaces

comprises at least two user-interface elements for facilitating data transactions, wherein said first

user interface comprises at lest one more user-interface element than said second user interface.

61. (New) The method of claim 59, wherein the first and second user interfaces are

displayed in an application running on different computers.

62. (New) The method of claim 60, wherein the application is a web browser.

63. (New) The method of claim 58, wherein the first and second data stores are the

different data stores, wherein the first request is received from a first user while the second

request is received from a second user different than the first, wherein the first description is

supplied to the first user while the second description is supplied to the second user.

Client Docket No.: P2468USC1 Attorney Docket No.: APLE.P0004C
